

Overview

This presentation provides an overview of how to use the `princeton` beamer theme. It also serves as a unit test for developing further extensions to this package.

- ▶ Introduction to the `princeton` theme structure
- ▶ Demonstration of available layout and style options
- ▶ Guidance for slide layouts
- ▶ Validation of functionality through example slides

Example Slide

1/2

How a slide could look like with the `princeton beamer` theme

This is a generic slide with some text to show how a potential slide could look like.

Block Info

Block elements are useful to show constraint information on a topic.
The template supports **block**, **exampleblock** and **alertblock**.

Exampleblock

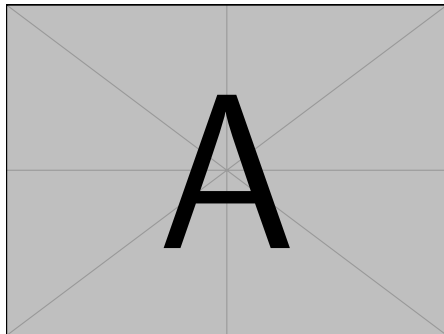

Blocks can also have items or any other latex environment

- ▶ itemize
- ▶ enumerate
- ▶ description

Alertblock

To highlight important content use the **alert** command instead of **textbf**!

$$G_M(\overset{\text{vertices}}{\underbrace{V_M}_{\text{orange}}}, \overset{\text{edges}}{\underbrace{E_M}_{\text{blue}}})$$

Example Slide

2/2

Two columns, with 50/50 split including images

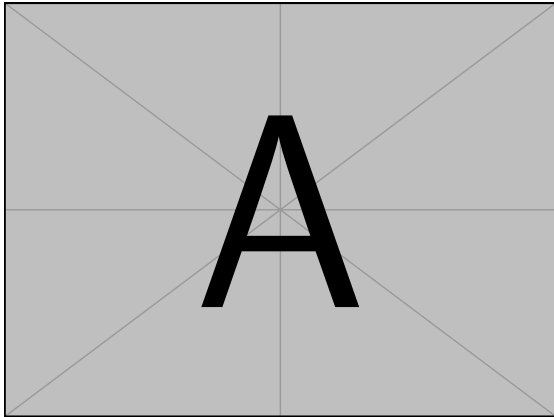

Image A

Something about **Image A**

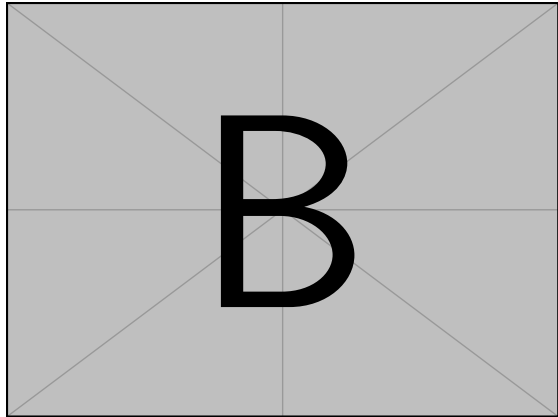

Image B

Something about **Image B**

Add references, images sources or other secondary information into the footer!
